Proof-of-Concept at Packaging Price

SAP NetWeaver Identity Management

Would you like a detailed insight into the functional possibilities and benefits of SAP NetWeaver Identity Management?

wikima4 creates a **proof-of-concept** for your company with which you can design provisioning in SAP landscapes in a simple, secure, efficient and audit-compliant manner.

What you achieve with SAP NetWeaver Identity Management:

- ✓ **Central database**
You create a consistent and central database for identities
- ✓ **Automated authorisation management**
You set up the technical basis for automated authorisation management.
- ✓ **Unified User Identity**
You migrate the existing users to a new unified user identity.
- ✓ **Workflow for access rights**
You establish a workflow for the approval of access rights by the respective supervisor
- ✓ **Central allocation of authorisations**
You have created a central allocation of authorisations on the connected systems.
- ✓ **Improving data quality**
You improve the data quality in the connected systems.

...and thus create **secure and efficient business processes.**

Every IT department knows these current challenges:

- External latent threats such as unauthorised data access and theft, which continue to increase due to remote work ("home office").
- Up to 40% of employees have unauthorised access to company data.
- Manual safety checks must be carried out on all systems
- Up to 30% of the costs are used for authorisation problems of the different systems.

TIP for NON-SAP systems:

With Netweaver Identity Management, you not only cover the provisioning of access rights of an SAP landscape. You can also integrate NON-SAP systems.

The opportunity for your company:

A well-integrated and smoothly functioning SAP Identity Management convinces with much more than just workload reduction and cost savings. In addition to compliance with legal requirements, it also simplifies the implementation of single sign-on.

60% Reduction of SOD ("Segregation of Duties") conflicts...

...this results in fewer IT costs for manual system checks and problem reports.

Reduced manual monitoring, automated logs and reporting...

...more resources and time to offer new innovative IT services.

The business has quicker, standardised access to applications...

.... Increasing user satisfaction through the use of self-service scenarios

Audit-compliant assignment of rights...

...Central User Administration (CUA) is no longer supported by

SAP. With SAP NetWeaver Identity Management, you enable this to continue to be executed in an audit-compliant manner, also for ABAP, JAVA and NON-SAP systems.

Our approach

- ✓ Day 1: Kick-off workshop on-site presentation of SAP NetWeaver Identity Management, clarification of the customer situation and recording of general requirements
- ✓ Day 2: Installation of SAP NetWeaver Identity Management on a test server provided by you (remote).
- ✓ Day 3 & 4: Setting up the exemplary scenarios for the typical identity management functions (remote)
- ✓ Day 5: Review workshop in your company: Summary of the results, training of the users, definition of the next steps.

Our experience as IDM Experts

As a consulting firm with many years of experience in the field of SAP Security, Compliance and Identity Management and SAP Special Expertise Partner for Governance, Risk & Compliance (GRC) and ESOA/NetWeaver, we have been able to gain a great deal of positive experience with SAP Identity Management.

We are happy to provide **references** for pilot projects that have already been successfully implemented or to demonstrate the impressive functionalities of NetWeaver Identity Management on our own systems.

wikima4

is a Swiss software and consulting company. It supports and accompanies innovative companies and organisations in the implementation and operation of an efficient security and compliance management.

The pilot installation

As part of a proof-of-concept, specialists from wikima4 create a typical scenario with SAP NetWeaver Identity Management.

We integrate a test system, read and consolidate the data from the systems and set up exemplary standard processes such as user creation/modification, provisioning, approval and deprovisioning.

We are also implementing a user self-service and a monitoring application.

Technical requirement

- Remote access for technical implementation
- System resources according to PAM from SAP
- Provide servers for the technical implementation

Your offer PROOF-of-CONCEPT

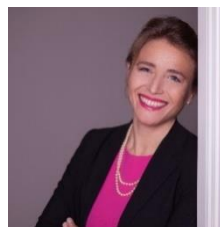

5 days with an experienced expert for SAP NetWeaver Identity Management

**EUR 7'900
CHF 8'500**

**excluding travel expenses,
excluding VAT / MwSt.**
